Application/Control Number: 10/621,802

Art Unit: 1618

Claims 68-83 are presented for examination.

The response to the restriction of April 7, 2006 has been received and entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 68-83 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gorsek (6,103,756) in view of Kammari et al. (4,879,312).

Art Unit: 1618

Gorsek teaches the use of a carotenoid in combination with polyphenol, a glutathion precursor, a vitamin anti-oxidant and a lipoic acid in a pharmaceutical formulation for the treatment of an ophthalmic disorder such as macular degeneration. See the abstract, table 1 and claims 1-3. The above reference differs from the claimed invention in the presence of an omega-3 fatty acid. Kammari et al. teach the claimed omega-3 fatty acids such as eicosapentaenoic acid and docasahexaenoic acid have been previously used in a pharmaceutical formulation for the treatment of ophthalmic angiogenic disorders. See the abstract, figures 6 and 7. It would have been obvious to a person skilled in the art to incorporate EPA and DHA into the primary reference, considering that Kammari et al. teach the addition of such agents to the ophthalmic formulations for the treatment of ophthalmic angiogenic conditions is old and well known.

One skilled in the art would have been motivated to combine the teachings of the above references, since one relates to the use of a carotenoid, a polyphenol, a lipoic acid, a vitamin and a glutathion precursor for the treatment of ophthalmic conditions such as macular degeneration, which is an angiogenic disorder, and the other relates to the use of EPA and DHA for the treatment of ophthalmic angiogenic conditions. The above references in combination make clear that the claimed components individually have been previously used for the treatment of the claimed designated conditions. It is geneally prima facie obvious to combine two compositions which is taught by the prior art to be useful for the same purpose, in order to form a composition which is to be used for the very same purpose. See In re Kerkhoven, 626 F. 2d 848, 205 USPQ 1069

(CCPA 1980). Applicant has presented no evidence to establish the unexpected or unobvious nature of the claimed invention, and as such, claims 69-83 are properly rejected under 35 U.S.C. 103.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Zohreh A. Fay whose telephone number is (571) 272-0573. The examiner can normally be reached on Monday to Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Hartley can be reached on (571) 272-0616. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
